| <p><b>Note: Ancient fascial tensions</b> - Fascia is like one large sheet of cling film that enwraps every organ, bone and joint of our body, and many spaces in between. Over lifetimes tension-related etheric sheets of cling film (which are tightly packed one upon another in an etheric "wad" of increasingly immobile energy) are created and carefully stored. This distorts the ability of the fascial sheet we have in <u>this</u> lifetime to move properly, creating repetitive musculo-skeletal and other issues that may evade correction. Ensure physical body is hydrated before making corrections.</p> |   |
